GOVERNMENT DOMAIN SECURITY REPORT

electricities.com

Electricities of North Carolina Joint Municipal Assistance Agncy, North Carolina

Checked October 7, 2026 at 9:27 PM UTC · Check ID 9924ef60-d933-4b78-a69f-cce1811ff4de

D+

6 of 16 checks passed **Residents are exposed**

Basic protections recommended by CISA are missing. Each fix below is a standard setting, listed in order of risk to residents.

● 6 passed ● 2 need attention ● 8 missing

Website	Email	DNS and domain
5 of 8	1 of 5	0 of 3

Not on a .gov domain

electricities.com is not a .gov address. Anyone can register a look-alike .com or .org, so residents cannot tell from the address alone that this is the official site.

CISA and DHS advise that .gov is a requirement for secure government, trusted communication and public trust. Every day on a non-.gov address is a day residents can be fooled by an impostor site or email.

What to fix first

In order of risk to residents. Each is a one-time setting that then needs to be watched.

1. **Send every visitor to HTTPS** — HIGH RISK

   Residents who type the plain address or follow an old link get an unencrypted page that can be read or changed on public Wi-Fi.

   Fixed by: Your web host

2. **Turn DMARC enforcement on** — HIGH RISK

   A DMARC record exists but only monitors. Fake tax bills, utility shut-off notices and payment requests sent in the agency's name are still delivered.

   Fixed by: Your email or DNS provider

3. **Publish an SPF record** — HIGH RISK

   Receiving mail systems cannot tell the agency's real email from a forgery, so residents can receive fake notices in its name.

   Fixed by: Your email or DNS provider

4 **Turn on DNSSEC** — HIGH RISK

DNS answers are not signed. A forged answer can send residents to a fake payment page, or redirect the agency's email, with no visible sign.

Fixed by: Your DNS host and domain registrar

5 **Enforce MTA-STS** — MEDIUM

MTA-STS is set up but not enforced, so mail to agency staff can still be forced onto an unencrypted connection.

Fixed by: Your email or DNS provider

6 **Turn on mail encryption reports (TLS-RPT)** — MEDIUM

Nobody is told when encrypted mail delivery to the agency fails or is tampered with.

Fixed by: Your DNS provider

7 **Add a CAA record** — MEDIUM

Any certificate authority in the world may issue a certificate for this domain, which makes impersonating the site easier.

Fixed by: Your DNS provider

8 **Publish a security contact (security.txt)** — MEDIUM

People who find a security problem have no standard way to tell the agency before it is misused.

Fixed by: Your web host

9 **Ask your host about RPKI** — MEDIUM

The network route to the website is not signed, so traffic can be hijacked onto someone else's network.

Fixed by: Your hosting provider

10 **Add IPv6 support** — MEDIUM

Networks that only use IPv6, including some mobile carriers, cannot reach the site directly.

Fixed by: Your web host

All results in detail

Every record and value we saw, grouped by area. Written for your IT team, readable by anyone.

Website — 5 of 8 passed

HTTPS certificate — PASS

Issued by	**DigiCert Global G2 TLS RSA SHA256 2020 CA1**
Issued to	***.electricities.com**
Expires	**December 30, 2026 (84 days after this check)**
TLS version	**TLSv1.3**

Redirect to HTTPS — MISSING

HTTPS available	Yes
Plain address redirects to HTTPS	No

What this means: Residents who type the plain address or follow an old link get an unencrypted page that can be read or changed on public Wi-Fi.

How to fix: Redirect every http:// request to https:// with a permanent (301) redirect. (Your web host)

HSTS — PASS

HSTS header	Sent
Max age	63,072,000 seconds
Includes subdomains	Yes

Certificate trust and match — PASS

Trusted chain	Yes
Strong public key	Yes
Valid signature	Yes
Name matches domain	Yes

CAA record — MISSING

CAA record	Not found

What this means: Any certificate authority in the world may issue a certificate for this domain, which makes impersonating the site easier.

How to fix: Publish a CAA record naming the authority you use, for example 0 issue "letsencrypt.org". (Your DNS provider)

Framing protection — PASS

X-Frame-Options	SAMEORIGIN

File type protection — PASS

X-Content-Type-Options	nosniff

Security contact (security.txt) — MISSING

/.well-known/security.txt	Not found

What this means: People who find a security problem have no standard way to tell the agency before it is misused.

How to fix: Publish /.well-known/security.txt with a contact address and an expiry date. (Your web host)

Email — 1 of 5 passed

SPF — MISSING

SPF record	Not found

What this means: Receiving mail systems cannot tell the agency's real email from a forgery, so residents can receive fake notices in its name.

How to fix: Publish one TXT record that lists every service sending mail for the domain and ends in -all. (Your email or DNS provider)

DKIM — PASS

Selectors found	k2

DMARC — NEEDS ATTENTION

Policy	none (monitor only)
Record	`v=DMARC1; p=none;`

What this means: A DMARC record exists but only monitors. Fake tax bills, utility shut-off notices and payment requests sent in the agency's name are still delivered.

How to fix: After reviewing the reports, change p=none to p=quarantine, then to p=reject. (Your email or DNS provider)

MTA-STS — NEEDS ATTENTION

DNS record	Not found
Policy file	Found
Enforced	No

What this means: MTA-STS is set up but not enforced, so mail to agency staff can still be forced onto an unencrypted connection.

How to fix: Change the policy file mode from testing to enforce. (Your email or DNS provider)

TLS-RPT — MISSING

TLS-RPT record	Not found

What this means: Nobody is told when encrypted mail delivery to the agency fails or is tampered with.

How to fix: Publish a TXT record at _smtp._tls with an address to receive reports. (Your DNS provider)

DNS and domain — 0 of 3 passed

DNSSEC — MISSING

Zone signed	No
Result	No DNSSEC records found. DNSSEC may not be enabled for this domain.

What this means: DNS answers are not signed. A forged answer can send residents to a fake payment page, or redirect the agency's email, with no visible sign.

How to fix: Turn on DNSSEC signing at the DNS host, then add the DS record at the registrar. (Your DNS host and domain registrar)

IPv6 — MISSING

Website reachable over IPv6	No
Name servers reachable over IPv6	No

What this means: Networks that only use IPv6, including some mobile carriers, cannot reach the site directly.

How to fix: Ask the host for an IPv6 address and publish an AAAA record for the site. (Your web host)

RPKI route protection — MISSING

Website route signed	No
Website route valid	No
Name server route valid	Yes

What this means: The network route to the website is not signed, so traffic can be hijacked onto someone else's network.
How to fix: Ask the host to publish route origin authorizations (ROAs) for the network the site is on. (Your hosting provider)

.gov domain — NOT SCORED

Ends in .gov	No

What this means: Anyone can register a look-alike .com or .org, so residents have no way to confirm this is the official site. Every .gov request is verified by CISA.

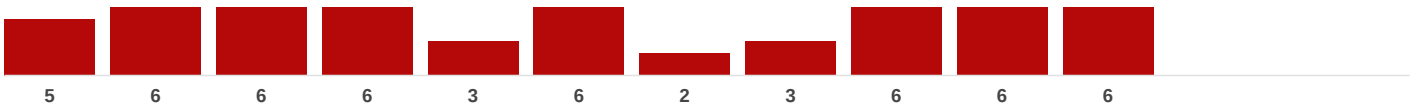
Hosting and platform

Informational, not scored

Website server	**141.193.213.10**
Mail server	**electricities.com.1.0001.arsmtp.com**
Website server reputation	**Not on abuse lists**
Mail server blocklists	**Not listed**
WordPress	**Yes, version 7.0.5**
Email addresses published on the site	**1**
Broken links found	**1**
Referrer policy header	**No**

Progress over time

Checks passed at each scan, oldest to newest. Highest possible is 16.



If these basics were missed, what else has been missed?

These are published CISA standards that any IT department or provider can check in seconds. YesGov can fix all 10 in under 24 hours, re-run this check to prove it, and keep watching every day. The move to .gov takes 1 to 2 weeks because CISA verifies each request; security fixes on the current domain do not wait for it.

yesgov.com/contact · (888) 777-0017 · info@yesgov.com

How we check

We only check settings that any computer on the internet can see: DNS records, certificates, web headers and mail policies. We never log in to, scan or probe any agency system. The 16 checks build on CISA Binding Operational Directive 18-01 and other published internet standards. Full method: yesgov.com/open-data#how-we-grade.

Verify this report online

Scan the code or visit the address below to see these results, check the domain again and get alerts when anything changes.
