GOVERNMENT DOMAIN SECURITY REPORT

flytxk.com

Checked October 21, 2026 at 8:57 AM UTC · Check ID 8e155de6-7f74-4b68-ab2e-62e9efcb8a93

C+

9 of 16 checks passed **Needs attention**

The basics are in place, but several standard protections are missing. The list below is in order of risk to residents.

● 9 passed ● 2 need attention ● 5 missing

Website	Email	DNS and domain
6 of 8	3 of 5	0 of 3

Not on a .gov domain

flytxk.com is not a .gov address. Anyone can register a look-alike .com or .org, so residents cannot tell from the address alone that this is the official site.

CISA and DHS advise that .gov is a requirement for secure government, trusted communication and public trust. Every day on a non-.gov address is a day residents can be fooled by an impostor site or email.

What to fix first

In order of risk to residents. Each is a one-time setting that then needs to be watched.

1. **Repair the SPF record** — HIGH RISK

   Receiving mail systems cannot tell the agency's real email from a forgery, so residents can receive fake notices in its name.

   Fixed by: Your email or DNS provider

2. **Turn on DNSSEC** — HIGH RISK

   DNS answers are not signed. A forged answer can send residents to a fake payment page, or redirect the agency's email, with no visible sign.

   Fixed by: Your DNS host and domain registrar

3. **Enforce MTA-STS** — MEDIUM

   MTA-STS is set up but not enforced, so mail to agency staff can still be forced onto an unencrypted connection.

   Fixed by: Your email or DNS provider

4 **Add a CAA record** MEDIUM
Any certificate authority in the world may issue a certificate for this domain, which makes impersonating the site easier.
Fixed by: Your DNS provider

5 **Publish a security contact (security.txt)** MEDIUM
People who find a security problem have no standard way to tell the agency before it is misused.
Fixed by: Your web host

6 **Ask your host about RPKI** MEDIUM
The network route to the website is not signed, so traffic can be hijacked onto someone else's network.
Fixed by: Your hosting provider

7 **Add IPv6 support** MEDIUM
Networks that only use IPv6, including some mobile carriers, cannot reach the site directly.
Fixed by: Your web host

All results in detail

Every record and value we saw, grouped by area. Written for your IT team, readable by anyone.

Website — 6 of 8 passed

HTTPS certificate — PASS

Issued by	**WE1**
Issued to	**flytxk.com**
Expires	**December 14, 2026 (54 days after this check)**
TLS version	**TLSv1.3**

Redirect to HTTPS — PASS

HTTPS available	**Yes**
Plain address redirects to HTTPS	**Yes**

HSTS — PASS

HSTS header	**Sent**
Max age	**31,536,000 seconds**
Includes subdomains	**Yes**

Certificate trust and match — PASS

Trusted chain	**Yes**
Strong public key	**Yes**
Valid signature	**Yes**
Name matches domain	**Yes**

CAA record — MISSING

CAA record	Not found

What this means: Any certificate authority in the world may issue a certificate for this domain, which makes impersonating the site easier.

How to fix: Publish a CAA record naming the authority you use, for example 0 issue "letsencrypt.org". (Your DNS provider)

Framing protection — PASS

X-Frame-Options	SAMEORIGIN

File type protection — PASS

X-Content-Type-Options	nosniff

Security contact (security.txt) — MISSING

/.well-known/security.txt	Not found

What this means: People who find a security problem have no standard way to tell the agency before it is misused.

How to fix: Publish /.well-known/security.txt with a contact address and an expiry date. (Your web host)

Email — 3 of 5 passed

SPF — NEEDS ATTENTION

Record	`v=spf1 include:_spf.psm.knowbe4.com include:spf.protection.outlook.com ~all`
Ending	Soft fail (~all)

What this means: Receiving mail systems cannot tell the agency's real email from a forgery, so residents can receive fake notices in its name.

How to fix: Publish one TXT record that lists every service sending mail for the domain and ends in -all. (Your email or DNS provider)

DKIM — PASS

Selectors found	selector1, selector2

DMARC — PASS

Policy	quarantine
Reports sent to	8l5nq7l5ah@rua.powerdmarc.com
Record	`v=DMARC1; p=quarantine; rua=mailto:8l5nq7l5ah@rua.powerdmarc.com; ruf=mailto:8l5nq7l5ah@ruf.powerdmarc.com; fo=1; t=y;`

MTA-STS — NEEDS ATTENTION

DNS record	Found
Policy file	Found
Mode	testing
Enforced	No

What this means: MTA-STS is set up but not enforced, so mail to agency staff can still be forced onto an unencrypted connection.

How to fix: Fix any problems listed for the policy file, publish the _mta-sts TXT record, and set the policy mode to enforce. (Your email or DNS provider)

TLS-RPT — PASS

Record	`v=TLSRPTv1;rua=mailto:8l5nq7l5ah@tls.powerdmarc.com`

DNS and domain — 0 of 3 passed

DNSSEC — MISSING

Zone signed	No
Result	No DNSSEC records found. DNSSEC may not be enabled for this domain.

What this means: DNS answers are not signed. A forged answer can send residents to a fake payment page, or redirect the agency's email, with no visible sign.

How to fix: Turn on DNSSEC signing at the DNS host, then add the DS record at the registrar. (Your DNS host and domain registrar)

IPv6 — MISSING

Website reachable over IPv6	No
Name servers reachable over IPv6	No

What this means: Networks that only use IPv6, including some mobile carriers, cannot reach the site directly.

How to fix: Ask the host for an IPv6 address and publish an AAAA record for the site. (Your web host)

RPKI route protection — MISSING

Website route signed	No
Website route valid	No
Name server route valid	Yes

What this means: The network route to the website is not signed, so traffic can be hijacked onto someone else's network.

How to fix: Ask the host to publish route origin authorizations (ROAs) for the network the site is on. (Your hosting provider)

.gov domain — NOT SCORED

Ends in .gov	No

What this means: Anyone can register a look-alike .com or .org, so residents have no way to confirm this is the official site. Every .gov request is verified by CISA.

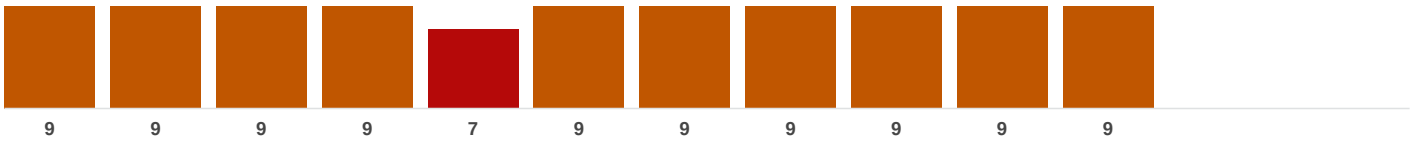

Hosting and platform

Informational, not scored

Website server	**141.193.213.20**
Mail server	**flytxk-com.mail.protection.outlook.com**
Website server reputation	**Not on abuse lists**
Mail server blocklists	**Not listed**
WordPress	**Yes, version 7.1.3**
Email addresses published on the site	**0**
Broken links found	**0**
Referrer policy header	**strict-origin-when-cross-origin**

Progress over time

Checks passed at each scan, oldest to newest. Highest possible is 16.

If these basics were missed, what else has been missed?

These are published CISA standards that any IT department or provider can check in seconds. YesGov can fix all 7 in under 24 hours, re-run this check to prove it, and keep watching every day. The move to .gov takes 1 to 2 weeks because CISA verifies each request; security fixes on the current domain do not wait for it.

yesgov.com/contact · (888) 777-0017 · info@yesgov.com

How we check

We only check settings that any computer on the internet can see: DNS records, certificates, web headers and mail policies. We never log in to, scan or probe any agency system. The 16 checks build on CISA Binding Operational Directive 18-01 and other published internet standards. Full method: yesgov.com/open-data#how-we-grade.

Verify this report online

Scan the code or visit the address below to see these results, check the domain again and get alerts when anything changes.
